## Per-configuration dependencies

```
( src/test/scala , Test configuration )

Test configuration classpath      Compile configuration,      % "test":
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % "test"

Test configuration:
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % Test
```

```
, sbt show compile:dependencyClasspath, derby jar show
test:dependencyClasspath, derby jar
, , ScalaCheck, Specs2 ScalaTest % "test"
```

```
, .sbt
```

```
,
, jar ,
Project lazy val , :
lazy val util = project
lazy val core = project
val ID ID in , :
lazy val util = project.in(file("util"))
lazy val core = project in file("core")
```

To factor out common settings across multiple projects, create a sequence named `commonSettings` and call `settings` method on each project.

```
, commonSettings , settings
lazy val commonSettings = Seq(
  organization := "com.example",
  version := "0.1.0",
  scalaVersion := "2.12.8"
)

lazy val core = (project in file("core"))
  .settings(
    commonSettings,
    // other settings
  )

lazy val util = (project in file("util"))
```

```

.settings(
  commonSettings,
  // other settings
)

version,

, :aggregate classpath

Aggregation
Aggregation aggregate task aggregated ,
lazy val root = (project in file(".")).aggregate(util, core)

lazy val util = project

lazy val core = project
  ,root util core , sbt,
