```

To factor out common settings across multiple projects, create a sequence named `commonSettings` and call `settings` method on each project.

```

, commonSettings , settings
lazy val commonSettings = Seq(
  organization := "com.example",
  version := "0.1.0",
  scalaVersion := "2.12.8"
)

lazy val core = (project in file("core"))
  .settings(
    commonSettings,
    // other settings
  )

lazy val util = (project in file("util"))

```

```

.settings(
  commonSettings,
  // other settings
)

version, ,

```

```

, :aggregate classpath

```

### Aggregation

```

Aggregation aggregate task aggregated ,
lazy val root = (project in file(".")).aggregate(util, core)

lazy val util = project

lazy val core = project
